

SETTING UP A VPN ON AN IOS DEVICE

Before setting up a VPN you will need to know your server, remote ID, login details/certificate and the type of VPN you want to set up (IKEv2, IPSec or L2TP).

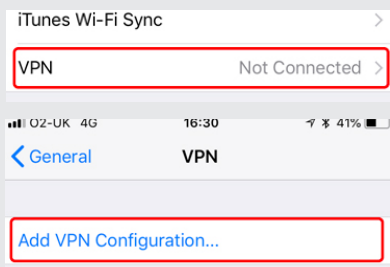

1. Go to **'Settings'**

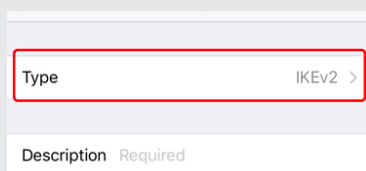

2. Click **'General'**

3. Scroll down and select **'VPN'** then **'Add VPN Configuration'**

4. Choose **'Type'** and pick from **'IKEv2'**, **'IPSec'**, or **'L2TP'**

5. Enter your VPN settings information including a description, server and remote ID

Description	Required
Server	Required
Remote ID	Required
Local ID	

6. Enter your authentication login details (username/certificate and password)

7. If you use a proxy, enable by clicking **'Manual'** or **'Auto'**, whichever one you use

PROXY
<input type="radio"/> Off <input checked="" type="radio"/> Manual <input type="radio"/> Auto

8. Click **'Done'**

9. Under the VPN Configurations, slide the status bar on

10. When you have finished using the VPN, slide the status bar off
